PROGRAMME SYLLABUS

Virtuell ergonomi och design - magisterprogram
Virtual Ergonomics and Design - Master’s Programme
60 credits

Programme Code: VIRGA
Academic Level: Advanced level
Version: 3

The Programme Syllabus is valid from: Autumn term 2020
Date of Approval: 6 December 2017

1 Name and Scope of the Study Programme
The programme is provided by the University of Skövde and is named Virtual Ergonomics and Design - Master’s Programme. It comprises 60 credits.

2 General Objectives
Courses and study programmes on the advanced level shall involve the acquisition of specialist knowledge, competence and skills in relation to courses and study programmes on the basic level, and in addition to the requirements for courses and study programmes on the basic level shall:

- further develop the ability of students to integrate and make autonomous use of their knowledge,
- develop the students’ ability to deal with complex phenomena, issues and situations, and
- develop the students’ potential for professional activities that demand considerably autonomy, or for research and development work.

(Objectives for courses and study programmes on the advanced level, The Higher Education Act)

3 Programme Objectives
Main area of education is virtual product realization.

Objectives for Master’s Degree according to the Higher Education Ordinance

Knowledge and understanding
For a master’s degree (60 credits) the student shall

- demonstrate knowledge and understanding in the main field of study, including both an overview of the field and specialised knowledge in certain areas of the field as well as insight into current research and development work, and
- demonstrate specialized methodological knowledge in the main field of study.

Competence and Skills
For a master’s degree (60 credits) the student shall

- demonstrate the ability to integrate knowledge and analyse, assess and deal with complex phenomena, issues and situations even with limited information,
- demonstrate the ability to identify and formulate issues autonomously as well as to plan and, using appropriate methods, undertake advanced tasks within predetermined time frames,
- demonstrate the ability in speech and writing to report clearly and discuss his or her conclusions and the knowledge and arguments on which they are based in dialogue with different audiences, and
- demonstrate the skills required for participation in research and development work or employment in some other qualified capacity.

Judgement and Approach
For a master’s degree (60 credits) the student shall

- demonstrate the ability to make assessments in the main field of study informed by relevant disciplinary, social and ethical issues and also to demonstrate awareness of ethical aspects of research and development work,
• demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and

• demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning.

Local Objectives for the Study Programme according to the University of Skövde
Students shall, after completion of the programme

• show specialized knowledge and understanding of how ergonomics and user aspects can be integrated into the product realization process,

• show specialized knowledge of current research and developments in ergonomics simulation and industrial ergonomics,

• show specialized knowledge of current research and developments in industrial systems,

• show knowledge and understanding of how virtual ergonomics and design can contribute to sustainable development.

4 Programme Content
The programme provides specialized knowledge in ergonomics with a focus on the main field of virtual product realization. The programme specifically deals with integration of physical ergonomics and user aspects into the product realization process. The students gain a general understanding of industrial systems and also specialized knowledge about how human factors and ergonomics are addressed in the industry. The programme emphasizes the use of virtual ergonomics and design for improving efficiency and contributing to sustainable development.

The programme starts by introducing the basics of industrial systems and laying the foundation for specialization courses. The specialization courses deal with the integration of ergonomics and users aspects into the product realization process. The focus is on the use of virtual tools for ergonomic simulations and understanding industrial ergonomics. The programme ends with an individual degree project where the students apply their skills to scenarios in industrial ergonomics using a scientific approach.

The following courses are included in the programme

Industrial Systems Philosophy A1N, 6 hp
Product Lifecycle Management A1N, 6 hp
Research Methodology and Communication A1N, 6 hp
Scientific Theory in Informatics A1N, 6 hp
Systems Thinking A1N, 6 hp
Ergonomics Simulation A1F, 6 hp
Master Degree Project in Virtual Product Realization A1E, 18 hp

5 Admission Requirements
A Bachelor degree of at least 180 higher education credits (equivalent to 180 ECTS) within the fields of integrated product development, production engineering, mechanical engineering or information technology or similar.

A further requirement is proof of skills in English equivalent of studies at upper secondary level in Sweden, known as English course 6 / English course B. This is normally demonstrated by means of an internationally recognized test, e.g. IELTS, TOEFL or the equivalent.

The above admission requirements apply for admission to the programme. For further studies within the programme, the admission requirements for each course must be complied with. These admission requirements are specified in each separate course syllabus.

6 Degree
A student who passes the courses in the programme fulfills the requirements for obtaining a Degree of Master of Science (60 credits) with a major in Virtual Product Realization.

Degrees are awarded after application. Information about how to submit an application can be found on the University’s website.

7 Approval of Study Programme and Programme Syllabus
The study programme was approved by the Vice-Chancellor at the University of Skövde on 26 September 2017. This programme syllabus was approved by the Faculty Board at the University of Skövde on 6 De-
December 2017. It is valid from the autumn semester of 2020.

8 Changes to the Programme Syllabus
The programme studies are carried out in accordance with the current programme syllabus in effect at the time when the studies were initiated, provided that the structure of the programme is followed and that no leave of studies has been granted.

In the event of continued studies after a period of approved leave of studies, the student is to follow the programme syllabus in effect the term that the student resumes his/her studies. If substantial changes to the programme syllabus have been made, the student may contact a student and career counsellor in order to set up an individual study plan.

Reservations are made for the fact that the programme syllabus and its courses are subject to change, within the framework of the objectives of the programme.

9 Additional Information
The teaching is conducted in English.

Further information about the study programme will be available on the University’s web pages prior to a programme start.

National and local regulations for higher education are available on the University’s website.

During the programme, as well as after its completion, there are follow-ups. The main purpose of these follow-ups is to contribute to improvements of the programme. The students’ experiences and views constitute one of the criteria for the follow-up and are gathered by means of programme evaluations. The students will be informed of the results of the follow-up and any decisions regarding actions that are to be taken.
